Profile

Full-stack engineer (SDE-1) with 2+ years of experience building web products in Next.js and NestJS. Shipped dashboards, APIs and an invoicing platform used by 30+ merchants.

Work Experience

SDE-1, *CloseXPay Technologies Private Limited* 09/2024 – Present
Bengaluru, India

- Built the Wallet system and Admin dashboard in Next.js, backed by NestJS APIs I wrote, for a payment gateway handling high-value transaction volumes.
- Built an invoicing platform inside the gateway (invoice creation, PDF generation, customizable templates, recurring payments), now used by 30+ merchants.
- Designed and built product UI without specs, and designed closexpay.in .
- Work with cross-functional teams after deployment on reliability.

Application Engineer (progressed from Design Intern), *Engineering Technique* 07/2023 – 09/2024
Vadodara, India

- Trained engineering teams at several companies, including L&T, on SolidWorks and 3DEXPERIENCE.
- Solved software problems for clients in live engagements, working directly with their engineers.

Projects

PayBolt Dashboard, *Paybolt* 09/2025 – 01/2026

- Worked mainly on the frontend of a fully functional payment gateway dashboard in Next.js, building multiple new screens against existing REST APIs.
- Fixed bugs across merchant-facing flows and optimized UI performance and responsiveness.
- Built reusable components for tables, filters and forms to speed up screen development.

rupeeflow.co, *Freelance* 02/2026

- Designed and built the website for a payment product in one month.
- Live at rupeeflow.co

FinMatrix Dashboard, *Finmatrix* 05/2026

- Built a fully functional dashboard from scratch in one month, owning both the frontend and the backend.
- Developed the Next.js frontend and NestJS REST APIs, with PostgreSQL for data.
- Implemented authentication and role-based access control.
- Handled deployment on AWS.

Invoicing Platform, *CloseXPay* 06/2026 – 07/2026

- Built a standalone invoicing platform inside the payment gateway: invoice creation, PDF generation, customizable templates, recurring payments, auto reminders and many more features.
- Used by 30+ merchants. Full stack: Next.js, NestJS, PostgreSQL, AWS.

All-Terrain Vehicle — SAE BAJA 2022

- Designed and built the steering system using Ackermann geometry with a rack-and-pinion mechanism, physical constraints don't forgive a bad assumption after the fact, which shaped how I now think through a problem before writing code.

Technical Skills

Frontend:
React, Next.js

Backend
Node.js, NestJS, REST APIs

Cloud
AWS (EC2, S3, IAM, RDS)

Programming Languages
Java, Python, Javascript

Testing and Automation
Selenium

Engineering Tools
SolidWorks, 3DExperience, MATLAB,

Education

Bachelor of Technology, Mechanical Engineering, *Vishnu Institute of Technology CGPA - 7.3* 2020 – 2024
Bhimavaram

Certificates

AWS Academy AI-ML Foundations
Amazon Cloud Foundations

Full Stack Web Development using Node.js
Codinza

Advanced Robotics Control
Arc Labs, Germany

MATLAB Onramp
MATLAB
