Profile

Full-stack engineer (SDE-1) with a mechanical engineering background. I moved from mechanical to software for the chance to own a problem end to end instead of one piece of it, and that same instinct carries into how I work now. I talk directly with the people using what I build, watch how they actually use it, and treat AI as a tool for moving faster, not a substitute for understanding the problem first.

Work Experience

SDE-1, *CloseXPay Technologies Private Limited* 09/2024 – Present
Bengaluru, India

- Own payment gateway dashboards end-to-end in Next.js, including the Wallet system and Admin dashboard, backed by NestJS APIs I built.
- Independently design and build UI when no spec is provided translating product intent into interface decisions without waiting on a designer.
- Partner with cross-functional teams on system reliability, following through after deployment instead of moving on once code ships.

Application Enginner (progressed from Design Intern), *Engineering Technique* 07/2023 – 09/2024
Vadodara, India

- Worked hands-on in SolidWorks and 3DExperience on real client design problems, and got a close look at how a services company runs client engagements end to end — the same client-facing rhythm I bring to software work now.

Projects

Shift — Productivity Web App

- Solo-built a full-stack to-do and productivity tracker with authentication — including the parts nobody assigns you, like the data model and deployment.

All-Terrain Vehicle — SAE BAJA

- Designed and built the steering system using Ackermann geometry with a rack-and-pinion mechanism, physical constraints don't forgive a bad assumption after the fact, which shaped how I now think through a problem before writing code.

Telegram Chatbot + Web Automation Layer

- Led a team of 3 to build a Selenium-based automation layer feeding a Telegram chatbot that answers user questions from live web data.

Low Cost LPG leak detector

- Built a working, low-cost gas-leak detection device end to end, from choosing the sensor to a functioning physical prototype.

Technical Skills

Frontend:
React, Next.js

Backend
Node.js, NestJS, Rest APIs

Cloud
AWS (EC2, S3, IAM, RDS)

Programming Languages
Java, Python, Javascript

Testing and Automation
Selenium

Engineering Tools
Solidworks, 3dExperience, MATLAB,

Education

Bachelor of Technology, Mechanical Engineering, *Vishnu Institute of Technology CGPA - 7.3* 2020 – 2024
Bhimavaram

Certificates

AWS Academy AI-ML Foundations
Amazon Cloud Foundations

Full Stack Web Develpment using Node.js
Codinza

Advanced Robotics Control
Arc Labs, Germany

MATLAB Onramp
MATLAB

Languages

- English
- Hindi
- Telugu
- German (Basic)
- Japanese (basic)
